

Axepto

The logo for Axepto features the word "Axepto" in a bold, white, sans-serif font. A large, vibrant green checkmark is positioned over the letter 'A', extending its stroke across the top of the 'x'.

**AUTHENTICATION PLATFORM
FOR E-DOCUMENTS
SIGNING AND DELIVERY**

WHAT IS AXEPTO?

Axepto is a white label service that offers businesses to sign legally binding contracts with their customers through third party in a smooth and secure way. The solution provides delivery of electronic documents, their verification and processing in the field.

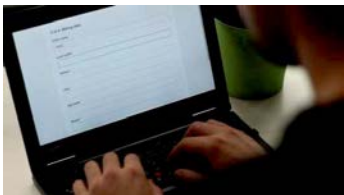

Axepto uses Signatus infrastructure to deliver documents in PDF format allowing to collect biometric features of customer's signature and other verification features (e.g. ID scan, photo of the person) to secure the signing procedure. The solution is cloud-independent and works in offline environment encrypting the contract on the spot.

HOW IT WORKS?

Customer orders online or by phone. PDF documents, password and metadata for delivery are automatically generated.

The data is sent to the Axepto platform that checks the content, accompanied by procedural guide and creates a virtual package of documents for delivery.

The application on the tablet the delivery company uses downloads only designated packages for the specific customer by credentials or ward. Followed by physical delivery.

After identity verification and the entering of the customer's password the expression of will (confirmation of the contractual relationship) the signature with biometric features is recorded on the tablet.

Based on the pre-defined workflow, additional items such as a scanned ID document, customer photograph, etc. can be attached to the package.

After completing the operation with customer, all signed documents in the package are securely sent to the company's system, as well as send via email to the customer.

BENEFITS

PAPERLESS

Digitalisation eliminates use of paper (printing, back delivery, scanning). Brings better document management.

LOWER INCREMENTAL COST

For delivery companies, infrastructure and maintenance costs are eliminated thanks to our transactional pricing model.

LEGALLY BINDING

Combination of biometric signature and identity verification provides sufficient legal certainty when entering into the contract for a product or service.

DELIVERY NAVIGATION

Even in an offline mode, the application navigates the courier through the delivery process and ensures compliance of all mandatory steps with minimum training effort.

SECURITY

1. Invisible metadata calculated using special algorithm are used to check that the document has not been exchanged for another one during the signing process.
2. Biometric handwritten signature characteristics (pen position, pressure, speed, acceleration, etc.) are asymmetrically encrypted. Private key for decryption is securely stored out of the device.
3. Data communication is encrypted and secured with authentication (HTTPS protocol).
4. Operating system and tablet storage is encrypted and password protected as well to maximize safety. A detailed description of security features will be offered in personal communication.

ANASOFT / SIGNATUS TECHNOLOGY

Axepto uses Signatus technology, developed by leading Slovak software house Anasoft. Signatus is a white label solution with customisable workflow. Signatus enables companies to get rid of paper and speed up business processes that require signature by easily deploying electronic signatures and electronic document workflow.

It's used by financial institutions, telcos and delivery companies.

WHO ARE OUR CUSTOMERS?

Consumer companies that sell their products and services via the Internet/phone (telecom operators, banks, utilities) and require customer's signature during the on-boarding procedure or delivery of product or service.

Delivery companies (couriers) that perform for the above-mentioned entities act of delivery and collection of handwritten signatures. Delivery takes place on the basis of the daily driving sheet in strictly defined time.

LEGISLATION

Our solution - which is defined as advanced electronic signature - can identify the user, is unique to them, is under the sole control of the user and is attached to a document in a way that it becomes invalidated if the contents are changed.

The solution will also apply REGULATION (EU) No 910/2014 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 23 July 2014 on electronic identification and trust services for electronic transactions in the internal market.

ABOUT THE COMPANY

The main aim of Axepto Company is to streamline the process of delivery of customer documents through a biometric platform for signing on the tablet. It combines many years of know-how that has been invested in the development of solutions by founders and partners of the company. The solution is developed on the basis of the world's award-winning solutions SIGNATUS (by ANASOFT APR spol. s r.o.) that have been adapted to the needs of modern-day courier and B2C companies.

Axepto aims to be the leader for transaction delivery of electronic documents.

After launching platform on the European markets, Axepto is going to expand the service not only geographically, but also with the range of its services. We consider it important to offer such solutions, which with the help of our SaaS technologies are going to contribute of electronization of courier services for the B2C segment.
